VDO Fleet Services.

Highly efficient fleet management for more safety and profitability.

Digitalize your fleet management with VDO Fleet solutions. Discover how you can automate your routines and simplify central tasks with our services. We provide you with a cloud-based solution that enables you to safely comply with legal requirements, effectively manage personnel, efficiently manage your fleet and seize new opportunities.

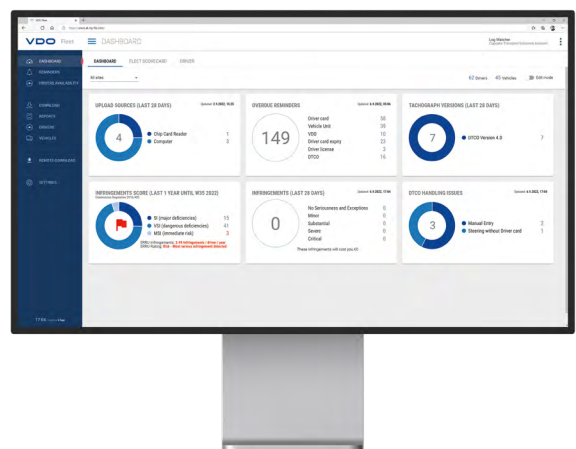

VDO Fleet Tachograph Management

Meeting legal requirements – simply, safely and efficiently.

Holistic fleet management makes your job easier: comply with EU and national legal requirements and make the most of the data from the intelligent tachograph for maximum fleet efficiency – it is safe and saves you time and money. Regardless of whether you are working on data management, dispatching, determining working hours, obligations or financial risks, VDO Fleet Tachograph Management is the ideal tool for conveniently managing your everyday tasks, with everything you need on screen.

We offer VDO Fleet Tachograph Management in three different packages: Basic, Advance and Premium. Visit our website today: www.fleet.vdo.de/produkte/tachograph-management

- Do not miss deadlines: reminders about legally required download dates
- Analyze data and get better: create weekly reports on driver activity and infringements, for example
- Avoid penalties: receive warnings about infringements of national and international legal requirements with the fine catalog and scorecard functions (ERRU*)
- Access anywhere: secure data management in the cloud

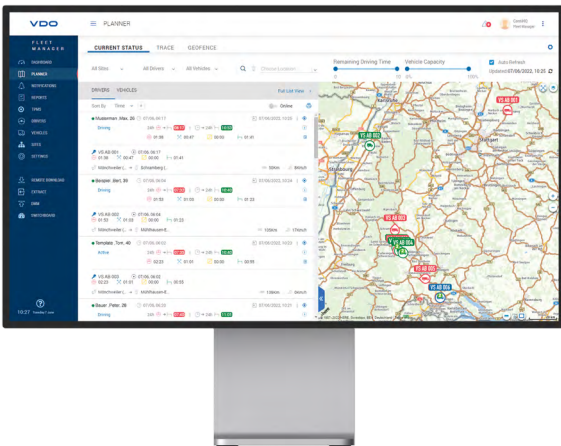

*ERRU (European Register of Road Transport Undertakings) is an electronic system that enables member states to exchange information on transport companies that are active on the roads. ERRU connects the national electronic registers of transport companies in various member states, enabling authorities to exchange information contained in their respective databases.

VDO Fleet Tachograph Live Services

Use full the potential of fleets with real-time data.

Schedule more precisely, shorten delivery and waiting times even further, optimize your routes, monitor vehicles and freight and specify arrival times. Tachograph Live makes this possible – with constant access to your fleet in nearly real time. This allows you to manage your tasks more efficiently and with less stress and to provide your customers with reliable information about where your trucks are and when the cargo will be delivered.

VDO Fleet Remote Download

Driver and tachograph data is always available with automated downloads via mobile communications.

With VDO Fleet Remote Download, you automatically receive memory card and driver card data punctually at set times from all European countries, without your driving personnel having to do anything. This not only provides you with the greatest possible security, but also creates the ideal data basis for timely fleet management. Because the more up to date the data records, the faster you can react and optimize. This saves you valuable time and money.

VDO Fleet Partner Solutions

Import or export data – intelligent interfaces made to measure.

Do you want to use VDO Fleet Services for individual data models, like for your own fleet management or payroll software, for example? No problem: our intelligent interfaces make VDO Fleet Services usable for mixed fleets and those without uniform software. VDO Fleet Connect allows you to transfer your data (from the tachograph, for example) to VDO Fleet Services through your system. VDO Fleet Extract allows you to integrate specific data from the VDO Fleet Cloud into your own software (like billing systems or payroll accounting).

VDO Fleet Safety Solutions

Standardize departure checks and make them 100 percent verifiable.

Continental Verified Inspection (CVI for short) makes it easy for your driving personnel to carry out 100 % verifiable digital departure inspections using an app, including complete documentation. By scanning special NFC tags, vehicles are automatically recognized and specific inspection zones are processed and documented. Through the central web portal for workshops and fleet managers, you benefit from detailed reports on inspection, vehicle and repair status to minimize downtime. With CVI, you increase the safety and efficiency of your daily departure checks, relieve fleet managers and optimize your workflows.
